Overview

CIR-41 Correctional Institute Ringdown Telephone

The CIR-41 is a rugged, ringdown telephone designed to provide safe and reliable communication in locations prone to abuse and vandalism. Calls may be received on this telephone however outgoing calls will only be connected to a single number – if the PABX is programmed to perform this function or if a Guardian AD-10 Autodialer is installed and programmed.

Features

Enclosure and Faceplate

 16 Gauge steel, zinc dichromate plated and powder coated, faceplate secured with vandal resistant screws.

Handset

high impact ABS with locked on caps

Hook Switch

magnetic reed hook switch, no moving parts

Surge Arrestor and Fuse

 prevents damage to the electronic circuits in the event of a high voltage spike on the telephone line

Noise Reducing Microphone

aids in clarity of transmission in noisy areas

Armored Handset Cord

withstands vandalism and severe use

Hearing-Aid Compatible

• compatible with inductively coupled hearing-aid devices

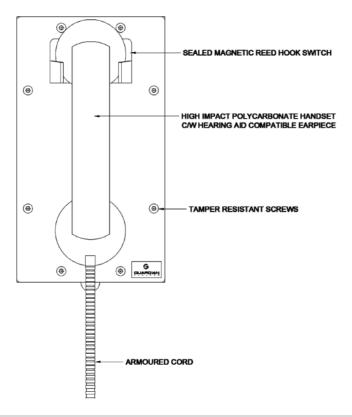

Figure 1 - Features

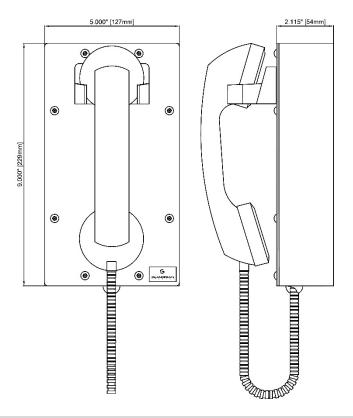

Figure 2 - Dimensions

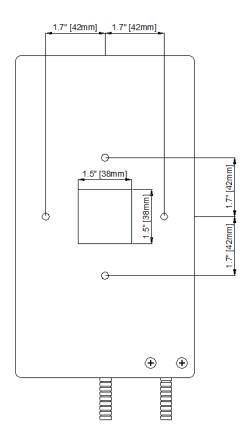

Figure 3 - Mounting

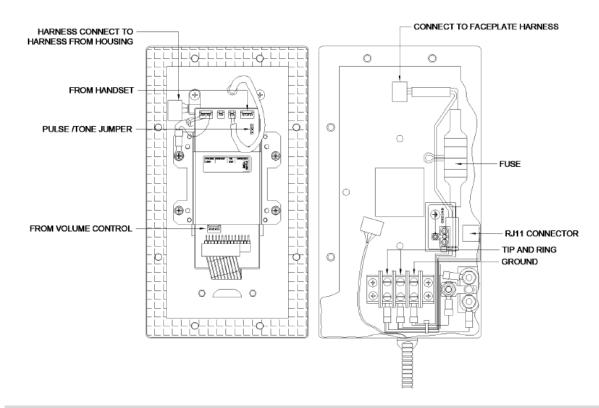

Figure 4 - Electrical Connections

Installing the CIR-41

- Follow all appropriate electrical codes and use only approved electrical fittings for the installation.
- Choose a wall location that is free of obstructions and permits space for cable or conduit runs.
- Ensure mounting can support 4lbs (1.8kg) and any additional load to which the telephone may be subjected.
- Ensure that none of the electrical connection circuits are live.
- Bring Tip, Ring and Ground wiring to the location where the wiring access opening in the back of the CIR-41 will be when the telephone is installed.
- Remove the eight (8) cover screws from the front of the unit and carefully remove the front cover assembly. NOTE that the handset and all electronics are attached to the front plate. The front cover may be separated from the back box by disconnecting the harness plug.
- Use the enclosure as a template to locate and drill holes for #8 or M4 mounting screws or other suitable attachments.
- Feed Tip, Ring and Ground wiring through the wiring access opening and secure the unit to the wall.
- Attach individual wires from the exchange (Tip/Ring/Ground) to the terminal strip (Tip & Ring are not polarity sensitive), or plug the RJ11 connector into the socket if this termination method was chosen. Even if an RJ11 connector is used, an approved earth ground must still be provided to the ground connection on the terminal strip.
- Ensure all connections are tight, then replace and secure the cover.
- Connect the telephone into the system.
- Test the unit by calling to and from another unit on the exchange.

See: Figure 2 - Dimensions

Tip: The CIR-41 may be wired directly to the terminal block or an RJ11 connector may be used.

Tip: Use the driver bit provided to remove the tamper resistant screws.

See: Figure 3 - Mounting

See: Figure 3 - Mounting

Note: An approved earth ground must be connected to the ground position on the terminal strip regardless of Tip and Ring wiring method.

Operating the CIR-41

 The CIR-41 Autodialer phone is designed for receiving calls and for connecting to a single number if the PABX is programmed to perform this function. Calling out is automatic simply by removing the handset from the cradle.

P007813	Handset – C/W 16" Armored Cord and Swivel			

Storage

General Storage (All situations):

- Note any stacking limits or warnings on packaging (if any).
- Do not store in temperatures over +80C.
- Store in original packaging if possible until needed.

Long Term Storage (> 6 Months):

- If area is air-conditioned and not subject to high changes in humidity, continue to store in original packaging.
- If wide humidity shifts are expected, then use these steps:
 - o Remove product from packaging (including plastic bags) and store on shelf in open air.
 - If area is subject to a high degree of dust, to help maintain cosmetic appearance you can cover with cloth (Do not cover with plastic or materials that will trap moisture) or clean periodically.
 - Do not store out of packaging long term where they are exposed to sunlight. Long-term exposure to UV may cause fading on plastic parts.

Cleaning Tips for Guardian Telephones

Guardian Telephones may occasionally need to be cleaned to maintain appearance. Generally, wiping the surface with a clean, water-dampened cloth will remove most films or residues. If the soiling is too stubborn for plain water, a mild detergent solution may be used. Be sure to wipe away any detergent residue with a plain water dampened cloth. The Telephone may be cleaned with any general-purpose household glass and surface type cleaner. Do not spray the telephone directly! Spray the cleaner on a soft cloth then wipe the surface. Pre-treated cloths, like those used for eyeglasses or cameras, may be used to clean the Telephone. Premoistened towelettes may also be used, however, avoid those containing lanolin or aloe, as they will leave a slippery residue. The handset and surface of the telephone may be cleaned with disinfectants used for general cleaning in a medical environment. Isopropyl alcohol may be used applied with a cloth. Avoid using alcohol on silicon-based keypads, since doing so may significantly degrade legibility.

- Do not use furniture polishes, waxes or plasticizer-based cleaner (Armor All etc.)
- Do not use lanolin, aloe, glycerin or other skin care type products.
- Do not apply any solvent such as acetone, mineral spirits etc.
- Do not directly spray or immerse the handset.

Warranty

Guardian Telecom, a division of Circa Enterprises Inc. warrants that its products are free from defective workmanship and materials. Guardian Telecom will, within three years from the date of final sale to the customer, replace or repair any such products provided they are returned to our facilities for examination.

Freight costs (including brokerage if applicable), both to and from Guardian, are the sole responsibility of the customer. This warranty does not extend to any items that are deemed to have been misused, modified, neglected, improperly specified, improperly installed, or used in violation of instructions or specifications approved by Guardian Telecom. Guardian Telecom, a division of Circa Enterprises Inc. shall not be liable for incidental or consequential damage of any kind caused by any defect in our product. The total liability shall not, under any circumstances, exceed the purchase price of the products furnished by Guardian Telecom, a division of Circa Enterprises Inc.

Disclaimer

The products covered by this manual are designed for use in Industrial Environments and/or Hazardous Locations. Due to the range of possible applications for these instruments the manufacturer will not be responsible for damages or losses of any kind suffered as a result of the use of this product, including consequential damages.

Warning

This device may be opened and reassembled by qualified personnel only, for the purposes of installing the product and replacing fuses, following the instructions in the product manual.

High voltages may be present in this product when connected to telephone wiring.

Service Telephone Number

1-800-363-8010

Guardian Telecom provides a customer service telephone number which is toll-free within North America. If you need assistance when installing or operating this product, please call the toll-free telephone number between regular business hours (8:00AM-5:00PM), Mountain Standard Time. If you are calling outside of regular business hours, please leave a detailed message, and a member of Guardian Telecom's Service Department will return your call as soon as possible. If your product requires service, Guardian personnel will supply you with an RMA (return materials authorization) number over the telephone or through our web site product return page. This number must be included with your return address and the name of the person to contact.

Feedback

Guardian Telecom continually strives to make reliable, durable, and easy to use products. If you, as an installer or user of our equipment, have any suggestions for improvements to this or any of our products or documents, including this manual, we would appreciate hearing from you.

Guardian Product Return

Guardian products have been quality tested and are in full working order when shipped from the factory, given the rugged nature of these products shipping is not expected to damage a unit. In the unlikely event of a malfunction Guardian follows the three step procedure below.

Step I - On-Site Correction

- The most common source of difficulties with a new product is improper installation in one of two ways: incorrect wiring connections or connection to an incorrect power source.
- Product wiring needs to be properly connected to the on-site wiring. Correct wiring instructions are shown in the user manual included with the product.
- Connecting a telephone to a standard power source, rather than tip & ring, will blow the
 telephone's internal, user-replaceable fuse. In the event of fuse burnout, disconnect the
 telephone from the power source, replace the fuse, and reconnect following the wiring
 diagrams provided with the product.

Step II - Return Materials Authorization (RMA)

- When a product has been installed following user manual instructions and the unit fails to operate, the user must contact Guardian Telecom to obtain authorization to return the product. This can be done by completing an RMA form online at https://www.guardiantelecom.com/support/rma/, or by calling the service telephone number given in this manual.
- After providing information on the product, the owner and the nature of the problem, Guardian will issue a RMA number, to be shown on documentation returned with the product.
- In addition to the RMA number, shipping documents should include name, address and telephone number of the owner along with contact information for the person responsible for the repair and/or the user who identified the malfunction.
- (Where a product is being returned for repair from outside of Canada, customs
 documentation must show the product's serial number, date of export [date of purchase],
 and a notation that the equipment is: "Canadian goods returning.")

Step III - Factory Authorized Service

- Once received, each product is carefully inspected and tested. If the product is under warranty, repairs are completed and the product returned to the owner, generally within five working days of receipt by the factory.
- A product that has been subjected to misuse, neglect or accident or is beyond the warranty
 period will be evaluated. The service department will provide the owner's representative
 with a repair cost estimate. Once approved, repairs are completed and the product
 returned, generally within five working days.
